

Ecopro signed an MOU with AMG for lithium long-term supply 2018.11.16

Ecopro signed a Memorandum of Understanding (MOU) with the Advanced Metallurgical Group NV (AMG) on November 14, 2018 regarding lithium supply and demand.

According to the agreement, AMG plans to build a lithium processing plant in the mine owned by Brazil, and we plan to use the lithium as raw material for the anode material.

The signing of this Memorandum of Understanding is important as the first step toward establishing a long-term strategic partnership with AMG in conducting the cathode material business. We have been making a variety of efforts to supply high quality lithium hydroxide for low cost production of high nickel anode materials. It is expected that our efforts will be fruitful through this MOU.
